| 2 | The invention relates to a method for processing a complex |
|---|--|
| 3 | request addressed to at least one SNMP agent (5) of a resource machine (2b) |
| 4 | from an SNMP manager (4) of an application machine (2a). The complex |
| 5 | request is processed so as to enable an integrating agent (6) to translate the |

-- ABSTRACT

6 complex request into SNMP requests and to optimize the number of SNMP

7 requests transmitted through the network (3), particularly the number of

8 GETNEXT requests.--
